| 2023 | <p>6. Are people's daily life habits consistent with their preference for food sustainability labels?
 Yefan Nian, Zhifeng Gao[‡], and Ruojin Zhao
 <i>Agribusiness: An International Journal</i> Forthcoming
 Abstract: Using a representative US consumer sample, this study systematically examines consumers' preferences for different food sustainability labels (USDA Organic, Non-GMO, Eco-Friendly, and Fair-Trade labels) and investigates whether consumers' life habits in other domains of life are consistent with their food purchasing decisions. We find that people's daily activities, such as pro-environmental behaviors away from home and physical exercise in everyday life, are correlated to consumers' WTP for sustainability-labeled food products. This study provides implications for designing proper strategies to improve sustainable food consumption, including targeting consumers who adopt a more environmentally sustainable and healthy lifestyle, such as conducting pro-environmental activities outside the home and physical exercise activities in daily life.</p> |
| 2022 | <p>5. An economic analysis of grafted organic tomato production in high tunnels
 Yefan Nian, Ruojin Zhao, Shufang Tian, Xin Zhao, and Zhifeng Gao[‡]
 <i>HortTechnology</i> 32: 459-470.
 Abstract: Using 2-year on-station trial data collected in Citra, FL, this study examines the effect of using grafting on the economic returns of organic tomato production in high tunnels. Our analysis suggests that grafting tends to increase the marketable yield of organic tomato production in high tunnels. However, the enhanced yield does not necessarily increase the net return, depending on market conditions and the relative performance of grafted transplants. In addition, the net return of grafted production is highly sensitive to the tomato selling price. Obtaining a price premium is essential for increasing the profitability of grafted organic tomato production in high tunnels.</p> <p>4. Do plastic warning labels reduce consumers' willingness to pay for plastic egg packaging? Evidence from a choice experiment
 Joanna Van Asselt[‡], Yefan Nian^{† ‡}, Moonwon Soh[‡], Zhifeng Gao, and Stephen Morgan
 <i>Ecological Economics</i> 196: 107460.
 Abstract: Using a choice experiment with a difference-in-difference design, we investigate whether putting warning labels on plastic egg crates reduces consumers' willingness to pay (WTP) for plastic packaging. Our results reveal that warning labels are effective at reducing consumers' WTP for plastics. Compared with pulp-based packaging, we estimate that plastic warning labels reduce WTP for clear plastic packaging on average by \$1.02, and decreased WTP for plastic-based foam by \$0.51. However, the effectiveness of the warning label depends on the information content of the warning. While labels warning against the negative impacts of plastic on health, the environment, and safety all reduced WTP for plastic, respondents in the health label treatment reduced their WTP by the largest amount.</p> |

3. [What can we learn from the interactions of food traceable attributes: A case study of Fuji apple product in China](#)
Ruifeng Liu, Jian Wang, Fei Liang, **Yefan Nian**, and Hengyun Ma‡
Applied Economics 2022:1-21.
Abstract: Using a face-to-face consumer survey in six cities across China, this study examines consumers' preferences for Fuji apple products' food traceability attributes and region of origin claims. The results show that consumers are willing to pay a positive premium for food-traceable attributes. There is a strong complementary effect between food-traceable attributes. Besides, substitution and complementary effects between attributes may vary over the sample cities.
- 2020
2. [Water management practices: Use patterns, related factors, and correlations with irrigated acres](#)
Yefan Nian, Qiuqiong Huang‡, Kent F. Kovacs, Christopher Henry, and Jason Krutz
Water Resources Research 2020(56): e2019WR025360.
Abstract: Using data from the 2016 Arkansas Irrigation Survey, this study describes the water management practice (WMP) use patterns by producers in Arkansas, USA, identifies the factors related to producers' choices among WMP groups, and examines the correlations between WMP uses and irrigated acreage. This study finds that about 77% of producers in the study area use two or more groups of WMPs to manage multiple aspects of irrigation, but that the factors that are associated with choices of WMPs vary by WMP group. The use of water flow meters, providing producers with education on the looming groundwater shortage problems and awareness of financial assistance available for conservation efforts, such as the state tax credits program, and use of WMPs by family members, friends, and neighbors are associated with increased use of WMPs. However, producers that are older, have smaller farms, and rely more on groundwater are less likely to use some of the WMPs. In addition, using water flow meters positively correlates with total irrigated acres, and irrigated acres in rice and soybeans. Therefore, to achieve the goal of water conservation, the promotion of WMPs should be accompanied by measures to control the total quantity of water allowed for irrigation.
 1. [Does social relation or economic interest affect the choice behavior of land lease agreement in China? Evidence from the largest wheat producing Henan province](#)
Ruifeng Liu, Zhifeng Gao, **Yefan Nian**, and Hengyun Ma‡
Sustainability 2020(12):4279.
Abstract: This study investigates the choice behavior of land lease agreements based on the household data collected from the largest wheat-producing province in China, Henan province. The results provide strong evidence that economic interest plays a key role in the choice of land lease agreements. Meanwhile, social relations between farmers also affect the choice of land lease agreements.

Peer-Reviewed Proceedings (1)

- 2021 | 1. [Developing an economic decision-support tool for growers' adoption of vegetable grafting production in the United States](#)
Yefan Nian, Zhifeng Gao, and Xin Zhao
Acta Horticulturae 2021:1302.
Abstract: This project develops a decision-support tool that allows vegetable growers to examine the economic cost-benefit of adopting grafting technology under different production scenarios. By providing growers a tool to better assess the economic feasibility of vegetable grafting, taking into consideration of some real-time factors directly relevant to their production systems and scenarios, it is expected to motivate more vegetable growers to consider using the grafting technology to benefit their vegetable production systems.

Working Papers (5)

1. Perception of food fraud and preferences for authenticity test in the Chinese online food market
Erpeng Wang, Zhifeng Gao, and **Yefan Nian**
Under review Food Policy.
2. Will stated attribute non-attendance questions introduce bias to respondents' behaviors in choice experiments?
Yefan Nian, Zhifeng Gao, Rodolfo M. Nayga Jr., and Yuning Zhao
Ready to submit to a journal. Target journal: Journal of Agricultural Economics.
3. Can social capital boost irrigation capital? Empirical evidence from North China
Yefan Nian, Qiuqiong Huang, Rodolfo M. Nayga Jr., and Arya Gaduh
Ready to submit to a journal. Target journal: World Development.
4. Do fertilizer subsidies improve soil quality: Myopic vs. dynamic analysis of smallholder farmers in Ghana
Joanna Van Asselt†, **Yefan Nian**†, and Kelly Grogan
Manuscript under preparation. Target journal: American Journal of Agricultural Economics.
5. Crop insurance, cost-sharing program, and growers' adaptation to climate change: An agent-based modelling approach
Yefan Nian, Zhifeng Gao, Kimberly Morgan, Charles Moss, and Xin Zhao
Manuscript under preparation. Target journal: American Journal of Agricultural Economics.

Works in Progress (5)

1. Intra- and inter- temporal risks in specialty crop producers' technology adoption
Yefan Nian, Zhifeng Gao, Kimberly Morgan, Charles Moss, and Xin Zhao

2. The role of reference points in specialty producers' decision making under risks
Yefan Nian, Zhifeng Gao, Kimberly Morgan, Charles Moss, and Xin Zhao
3. Tracing the trend in consumer preferences for eco-labeled food: A text-mining and topic modeling approach
